

Omega-Caps® Receives Full Approval in ConsumerLab.com Review

Omega-Caps®, a health supplement for dogs and cats, was recently given full approval by ConsumerLab.com in a product review. The supplement, which is offered by Pet Health Solutions, promotes healthy skin and coat, brain function, heart function and joint health.

(PRWeb) - Pet Health Solutions, a leader in veterinary quality nutritional supplements for horses and companion animals, is pleased to reveal that its new supplement, **Omega-Caps®**, has received full approval in a product review conducted by ConsumerLab.com. The supplement can improve the health of a dog or cat's coat, skin, joints, brain and heart functions with the use of a combination of proven ingredients like Eicosapentaenoic Acid (EPA) and Dicosahexaenoic Acid (DHA).

Nutritional supplements can provide dogs, cats and horses with the minerals and vitamins they may not be getting from their regular diet. Sometimes, nutritional issues are apparent in the dull appearance of the animal's coat or in problems with dry and raw skin. Other times, the problems may be internal, causing problems with movement, cognitive function and even the operation of the animal's heart.

EPA and DHA are in the family of omega-3 fatty acids and have been recognized for their ability to promote health in both humans and animals. The acids are found in marine animals such as krill, calamari and fish and are often used to achieve a healthy skin and coat in dogs and cats. However, studies of these omega-3 fatty acids also indicate that fish oil supplements can be good for the heart and may reduce the risks of a heart attack or stroke.

Other studies have shown indication that DHA consumption in animals, especially, can reduce that animal's risk of developing a cognitive disease, similar to Alzheimer's in humans.

ConsumerLab.com recently conducted a review of three pet supplements that included **Omega-Caps®** from Pet Health Solutions. The findings of the review show that Omega-Caps® was the only pet supplement that received approval from the product review, receiving checks in all of the following categories:

- Contained labeled amount of EPA, DHA, and other Omega fatty acids
- Purity
- Freshness
- Cost

Freshness is important in the potency of EPA and DHA as well as using the right quantity and Pet Health Solutions pays particular attention to the quality of the oils used in their pet supplements, ensuring that customers receive the best product possible. The ConsumerLab.com product review found that one of the other pet supplements was found to be spoiled and the third supplement was found to have inaccurate labeling, containing less DHA than it claimed.

Pet Health Solutions press release

Omega-Caps® comes in a choice of gelcaps, liquid or snip-tips capsules. For more information about Omega-Caps® and the other products that Pet Health Solutions offers, please visit their website at www.pethealthsolutions.com.

About Pet Health Solutions:

Pet Health Solutions (PHS)™ has been providing veterinary quality nutritional supplements for companion animals and horses for over 12 years. PHS utilizes premium U.S. made ingredients and regular 3rd party testing with all products to ensure utmost effectiveness in all product formulations. They provide products for pets such as joint support, skin and coat supplements, hygienics and digestive aids that are both innovative and proven beneficial. The success of their product line is driven by their sole focus on quality control and animal wellness. For distribution information, please visit: <http://pethealthsolutions.com/distributor.html>.
